

C' times as large as the depth or height of the prismatic structure. It is further preferable from the point of view of uniform light emission on the optical film that the length is selected to be not larger than 500 μm , particularly in a range of from 10 to 480 μm , more particularly in a range of from 50 to 450 μm . Moreover, it is preferable that a projected area of the discontinuous grooves onto an area of the film plane is not larger than 10%.
